

Physics I - Introduction

We will study various aspects of mechanics this semester:

- Kinematics & Dynamics
- Work, Energy & Conservation Laws
- Fluids: Hydrostatics & Hydrodynamics
- Oscillations, Waves & Acoustics

see **Syllabus**

Dr.-Ing. Hendrik Mattern

- background in engineering
 - Bachelor in Electrical Engineering and Information Technology
 - Master in Medical Systems Engineering
- PhD and research on high field magnetic resonance imaging
- mail: hendrik.mattern@ovgu.de
- **main affiliation with Physikalisch-Technische Bundesanstalt (PTB)**

Course Structure:

- **weekly lecture:**
 - presentation of the theoretical foundations of physics
 - demonstration of experiments
- **bi-weekly lecture tutorial:**
 - led by the instructor/teaching staff
 - focus on conceptual exercises
 - additional demonstrations/experiments
- **bi-weekly class tutorial:**
 - active student participation (*voting system*)
 - students present solutions to assigned physics problems
 - tutor provides guidance and problem-solving support

Class tutorial voting system

- class exercise tasks will be posted on eLearning platform approx. one week before the exercise takes place
- tasks should be solved before the exercise takes place
- prior to the exercise, you indicate, which tasks you solved
- through selection/"voting", you agree that you are able to explain and present the task and your proposed solution
- the solution does not have to be completely correct, however, it must be clear that you conscientiously dealt with the task and seriously attempted to solve it (otherwise all your selections/"votes" for that exercise will be revoked)
- exercise instructor will pick the presenting student randomly from all students who selected the particular task

Voting system example: What You Mark in the List

Example (Tutorial 2):

Name	1.2.1	1.2.2	1.2.3	1.2.4	1.2.5	1.2.6
Ada No-Sleep	✓	✓		✓		
Isaac Partyhard		✓	✓		✓	
Max Overvote	✓	✓	✓	✓	✓	✓

→ ✓ = "I can present this task"

- 1.2.1 → Ada presents
- 1.2.2 → random (Ada / Isaac)
- 1.2.3 → Isaac presents
- 1.2.4 → Ada presents
- 1.2.5 → Isaac presents

→ Max Overvote could be called for **any task** → (and will panic)

Voting system example: Points & Risk

- Each ✓ (valid) = 1 point
 - ✓ valid = serious attempt + explanation
 - ✗ Max Overvote:
 - no real attempt on some tasks
 - ALL votes revoked
 - 0 points
- Don't be Max Overvote → Vote only what you can explain

Voting system example: Final Grading

36 tasks total • 1 point per valid vote • 40% = **15 points needed**

Student	T1	T2	T3	T4	T5	T6	Total	Exam
Ada No-Sleep	3	3	2	3	2	3	16	✓
Isaac Partyhard	3	6	6	0	0	0	15	✓
Max Overvote	6 → 0	0	0	0	6	6	12	✗

→ Only total valid points matter → consistency best strategy, but up to you

Exam: Key Facts & rules

- Written exam (90 min)
- Eligibility: $\geq 40\%$ of all tutorial tasks (votes)
- **Allowed:** pen • ruler • simple calculator • blank paper
- **Not allowed:** cheat sheet • programmable/graphing calculator
- Bring student ID
- Rules:
 - derive equations clearly
 - insert numbers only at the end
 - always include units

Exam: Structure & content

- Structure: 25% Level 1 • 25% Level 2 • 25% Level 3 • 25% multiple choice (MC) MC theory
- MC: one correct answer • no negative points
- Content:
 - Level 1-3 will be based on the class tutorial questions → participate & practice the tutorials
 - MC questions will be theory based, i.e. content of lecture

Course resources:

- script and slides openly available as Jupyter notebooks

 - **FYI:** lecture/slides complement script and vice versa
 - book:
 - GIANCOLI, Douglas C. Physics for scientists and engineers with modern physics. Pearson Education, 2023.
 - **eLearning course** (enrollment required)
 - **LSF** (enrollment required)
 - **How to solve physics problems**
-

What is science?

Definition by **Cambridge Dictionary**: **Science**, *noun* /'saɪ.əns/
(knowledge from) the careful study of the structure and behaviour of the physical world, especially by watching, measuring, and doing experiments, and the development of theories to describe the results of these activities

*[left] from **wikipedia**, public domain; [right] from **wikipedia**, public domain*

How science works

- Science seeks order in observations and proposes testable explanations
- Absolute proof is impossible — confidence grows with experimental agreement
- Hallmark of science: interplay of imagination and disciplined testing

*[left] from **wikipedia** by Brian Brondel, License: **CC BY-SA 2.5** [right] from **wikipedia**,

Experiments: Breaking beliefs, building Knowledge

- Careful experiments test and refine ideas, making science more than speculation
- Reproducibility ensures that results hold beyond a single observer or setup
- Surprising experiments often overturn long-held beliefs
- From ancient thought to modern labs, progress rests on experimental evidence

from **wikipedia**, public domain

Models, theories, and laws

- Model: simplified picture (e.g. sound as a wave)
- Theory: broader, connects many phenomena, yields quantitative predictions
- Law: concise general relationship, often an equation
- Descriptive, not prescriptive — they report what nature does
- Each has a range of validity; crucial to recognize limits

from **wikipedia**, public domain

Units, standards, & motivation for the SI system

- A physical quantity = number + unit
- Standards must be stable, reproducible, widely available
- SI system (Système international d'unités):
 - Prevents confusion and reduces mistakes
 - Ensures comparability across labs and countries
 - Based on universal constants (stable, reproducible, transferable)

*Gimli Glider (1983): An Air Canada Boeing 767 ran out of fuel mid-flight because ground crew **calculated fuel in pounds instead of kilograms**, leading to half the needed fuel onboard.*

SI base units and definitions

from [wikipedia](#), License: public domain

Quantity	Unit	Symbol	Definition
Length	meter	m	Speed of light c in vacuum
Time	second	s	Cesium-133 transition frequency
Mass	kilogram	kg	Planck constant h
Electric current	ampere	A	Elementary charge e

Quantity	Unit	Symbol	Definition
Temperature	kelvin	K	Boltzmann constant k_B
Amount of substance	mole	mol	Avogadro constant N_A
Luminous intensity	candela	cd	Radiation at 540×10^{12} Hz
